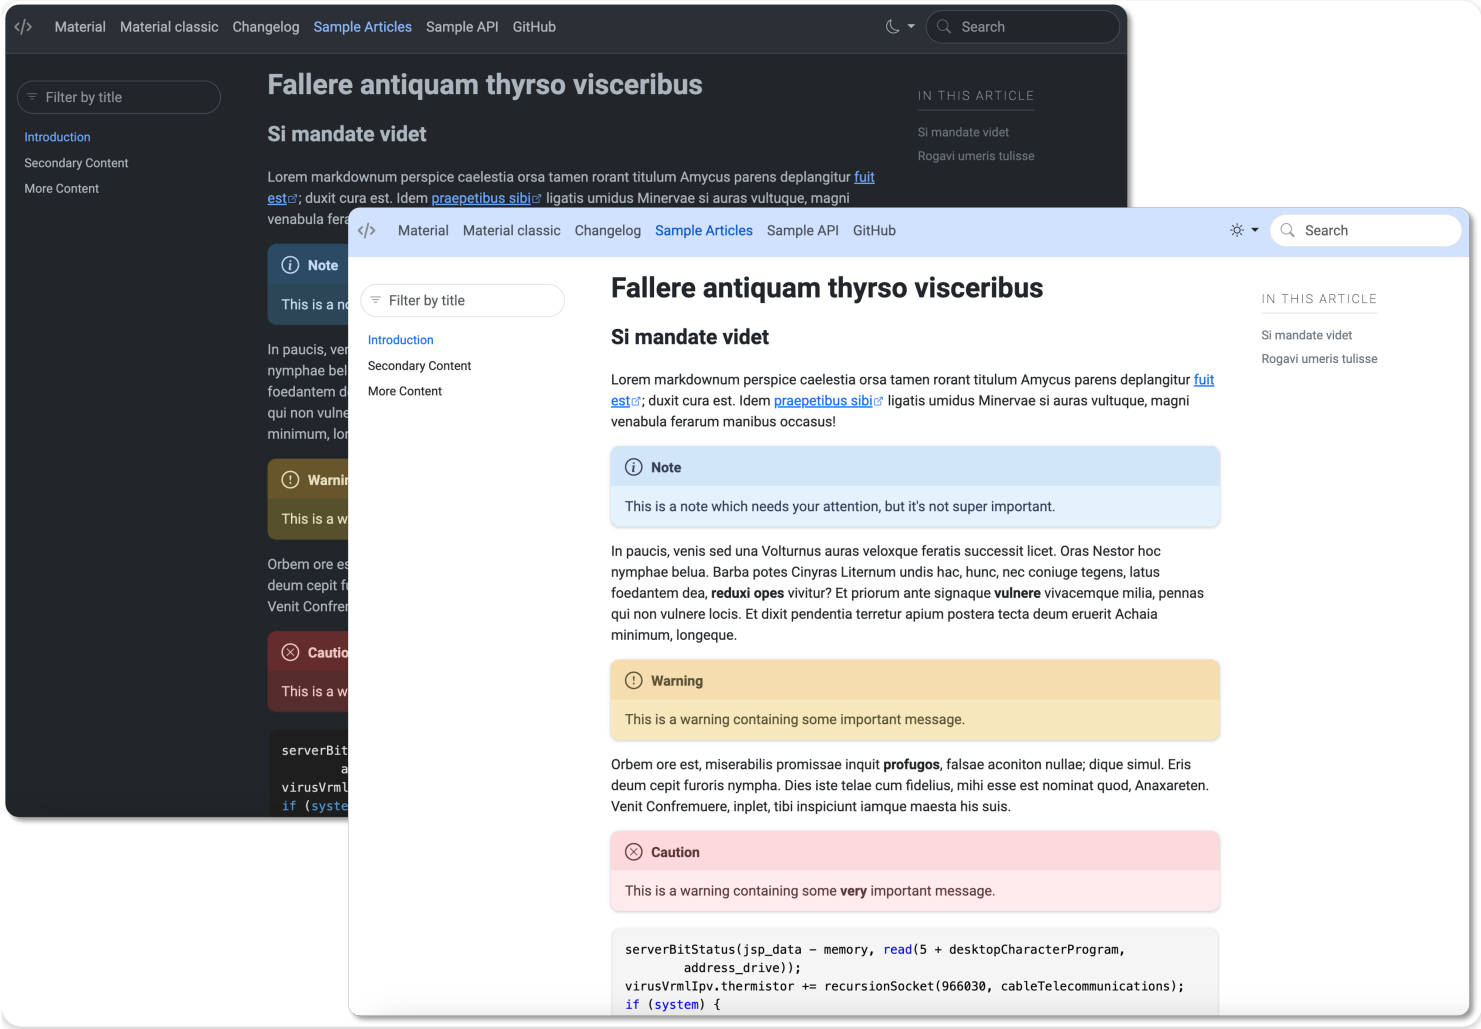
DocFX Material

A simple material theme for DocFX. This is an override of the **modern** template so you need to enable both in the `docfx.json`. The design was inspired by https://m3.material.io/.

If you are looking for the previous version of docfx-material that doesn't use the modern template you can still get it as material-classic.



Install

1. Download the source or the zipped file from the releases.
2. Create a `templates` folder in the root of your DocFX directory.
3. Copy the `material` folder to the `templates` folder.
4. Update the `docfx.json` configuration to include the material template:

```
{
    "template": [
        "default",
        "modern",
```

```
        "templates/material"
    ],
}
```

Color customization

DocFX's modern template is based on Bootstrap 5 (version 5.3 at the time of writing) so you can use Bootstrap's CSS variables to customize a lot of the colors.

Here are some of the most common customizations that can be made in the template's CSS file `material/public/main.css`, like updating the header color, changing the font,

```
/* Changing the navbar color only for the light theme */
[data-bs-theme='light'] nav.navbar {
  background-color: var(--bs-primary-bg-subtle);
}

/* Change active navlink color */
.navbar-nav .nav-link.active,
.navbar-nav .nav-link.show {
  color: var(--bs-link-hover-color);
}

/* Changing the site font */
@import url('https://fonts.googleapis.com/css2?
family=Roboto:wght@100;400;700&display=swap');

:root {
  ...
  --bs-font-sans-serif: 'Roboto';
  ...
}
```

Markdown extras

For more reference about markdown support in DocFX check the official documentation.

DocFX tips

Enable search

To enable search in DocFX it's not enough to set the configuration parameter to `true`:

```
"globalMetadata": {
    "_enableSearch": "true"
}
```

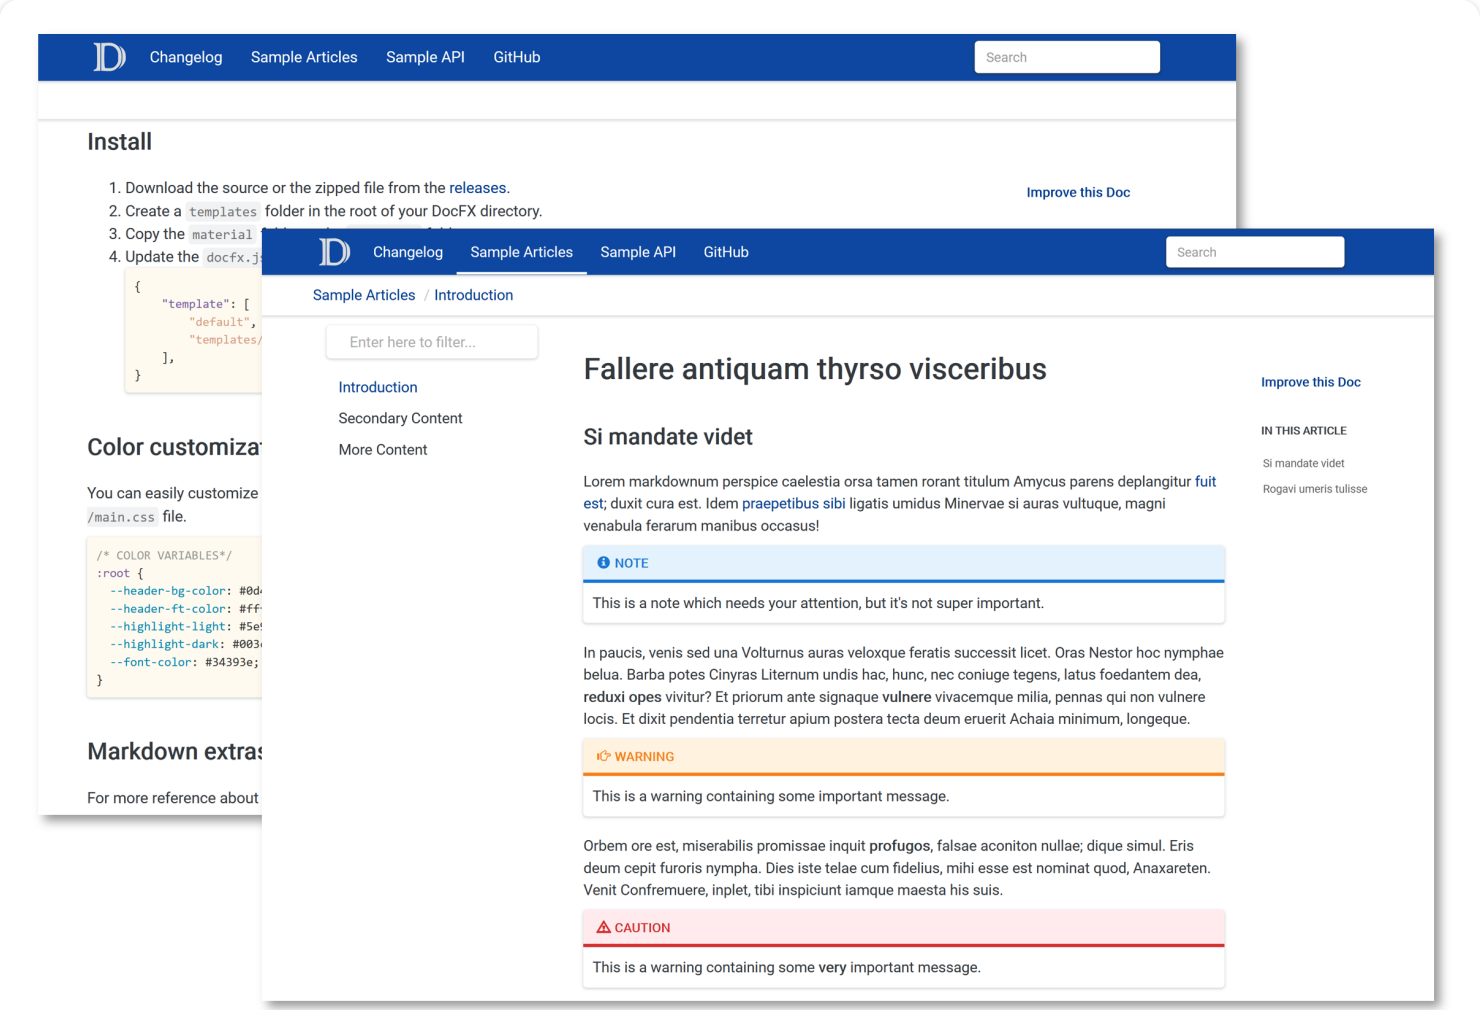
You also have to indicate in the `docfx.json` the post processor that generates the index for the searches:

```
"postProcessors": ["ExtractSearchIndex"],
```

DocFX Material

A simple material theme for DocFX. This is an override of the **default** template so you need to enable both in the `docfx.json`.

The colors were chosen using https://material.io/tools/color.



Install

1. Download the source or the zipped file from the releases.
2. Create a `templates` folder in the root of your DocFX directory.
3. Copy the `material-classic` folder to the `templates` folder.
4. Update the `docfx.json` configuration to include the material template:

```
{
    "template": [
        "default",
        "templates/material-classic"
```

```
    ],
}
```

Color customization

You can easily customize the color of the header bar and the links by updating the following variables in the `material-classic/styles/main.css` file.

```
/* COLOR VARIABLES*/
:root {
  --header-bg-color: #0d47a1;
  --header-ft-color: #fff;
  --highlight-light: #5e92f3;
  --highlight-dark: #003c8f;
  --font-color: #34393e;
}
```

    "_enableSearch": "true"
}
```

You also have to indicate in the `docfx.json` the post processor that generates the index for the searches:

```
"postProcessors": ["ExtractSearchIndex"],
```

Changelog

Version 1.0.0 🥳 - June 7th 2023

- Added support for the modern docfx template, including:
  - Light and dark mode.
  - Simplified color customization.
  - Improved hover effects.
  - Updated styles to new material theme: https://m3.material.io/get-started.
- Previous material template renamed to material-classic.
- Removed the need for the `head.tmlp.partial` in material-classic, now only the `main.css` is needed.

Version 0.5.1 - June 5th 2023

- Fixed `head.tmlp.partial` to work with updated default template.

Version 0.5.0 - Aug 27th 2020

- Updated textbox style with rounded corners and minor transition tweaks.
- Fixed hover on hamburger menu (small screens).

Version 0.4.0 - May 19th 2020

- Usability improvements and minor style changes in textboxes.
